#### Other common medications

**Antibiotic ointments:** Helpful in the treatment of small wounds, bites or minor infections. Always thoroughly clean the wound with soap and water first.

**Antibacterial soap**: Can be use to clean any wound or injury.

**Nasal sprays**: Saline nasal spray and pediatric nasal sprays (Little Noses) can be given in puppies and dogs to alleviate dryness and nasal congestion associated with a cold.

## Common Medications to Avoid in Your Dog

#### **Tylenol**

This seemingly safe drug used in humans for headaches and fever, can actually be deadly to your dog. Check with your veterinarian whether you can safely use this drug for your dog.

#### **Sudafed**

Pseudoephedrine is a decongestant found in many cold remedies, but acts like a stimulant in dogs, who can experience elevated heart rates and seizures.

### **Many Prescription Medications**

Pets often snatch pill vials from counters and nightstands or gobble up meds accidentally dropped on the floor. If accidental ingestion is suspected, call your veterinarian or the pharmacy.
